1.	On colliding in a closed conta	ainer the gas molecules				[RPET 2003]
	(a) Transfer momentum to t	he walls	(b)	Momentum becomes zer	0	
	(c) Move in opposite direction	ons	(d)	Perform Brownian motio	n	
2.	The relation between the gas	pressure P and average kinetic energy	rgy p	er unit volume E is		
		[CBSF	E PM1	[1993; UPSEAT 2000; R]	PMT	2000; RPET 2001; MP PET 2003]
	(a) $P = \frac{1}{2}E$	(b) $P = E$	(c)	$\mathbf{P} = \frac{3}{2} \mathbf{E}$	(d)	$\mathbf{P} = \frac{2}{3} \mathbf{E}$
3.	Kinetic theory of gases provid	le a base for				[AIEEE 2002]
	(a) Charle's law		(b)	Boyle's law		
	(c) Charle's and Boyle's law	7	(d)	None of these		
4.	At constant volume, temperar	ture is increased. Then				[CBSE PMT 1993; JIPMER 2000]
	(a) Collision on walls will be	less	(b)	Number of collisions per	unit	time will increase
	(c) Collisions will be in straig	ght line	(d)	Collisions will not change	è	
5.	Kinetic theory of gases was p	ut forward by				[RPMT 1999]
	(a) Einstein	(b) Newton	(c)	Maxwell	(d)	Raman
6.	Which of the following statem	nents about kinetic theory of gases is	s wro	ng		[AMU 1995]
	(a) The molecules of a gas a	re in continuous random motion				
	(b) The molecules continuou	usly undergo inelastic collisions				
	(c) The molecules do not int	teract with each other except during	g colli	sions		
	(d) The collisions amongst the	he molecules are of short duration				
7.	The pressure exerted by the g	gas on the walls of the container bec	cause			[CPMT 1972]
	(a) It loses kinetic energy					
	(b) It sticks with the walls					
	(c) On collision with the wal	lls there is a change in momentum				
	(d) It is accelerated towards	the walls		1		
8.	In kinetic theory of gases, a r momentum of the molecule i	nolecule of mass m of an ideal gas	collic	les with a wall of vessel w	ith v	elocity V. The change in the linear [AIIMS 1997]
	(a) 2 mV	(b) mV	(c)	– mV	(d)	Zero
9.	Consider a gas with density	$\overline{\mathbf{c}}$ and $\overline{\mathbf{c}}$ as the root mean square v	veloci	y of its molecules contain	ed in	a volume. If the system moves as
	whole with velocity v, then th	e pressure exerted by the gas is				[BHU 1994]
	(a) $\frac{1}{2}\rho \overline{c}^2$	(b) $\frac{1}{2}\rho(\overline{c}+v)^2$	(c)	$\frac{1}{2}\rho(\overline{c}-v)^2$	(d)	$\frac{1}{2}\rho(\overline{c}^2-v)^2$
10.	The kinetic energy of a perfect	o ct gas is 60 ioules and its volume is 3	3 litre	s. then its pressure will be		3
	(a) $2.104 \text{ N}/m^2$	(b) $4 104 \text{ N} / m^2$	(a)	$4 \dots 10^4 \text{ N} / m^2$	(J)	2_{10^4} N $/m^2$
	(a) 2×10 N/m	(b) 4×10 N/m	(C)	$\frac{1}{3}$ × 10 N/m	(a)	$\frac{-1}{3}$ × 10 N / M
11.	The mass of a gas molecule	is 4×10^{-30} kg. If 10^{23} molecules	s strik	e per second at 4 m^2 ar	ea w	tith a velocity 10^7 m/s , then the
	pressure exerted on the surfa	ce will be				
	(a) 1 Pascal	(b) 3 Pascal	(c)	2 Pascal	(d)	4 Pascal
12.	Equal number of molecules of	of hydrogen and oxygen are contai	ined i	n a vessel at one atmosph	eric	pressure. The ratio of the collision
	frequency of hydrogen molec	cules to that of oxygen molecules on	n the o	container walls will be		
	(a) 4:1	(b) 1:4	(c)	1:16	(d)	16:1

Problems based on Ideal gas equation

Basic level

					K	INETIC THEORY OF GASES
13.	In the relation $n = \frac{PV}{RT}$, $n =$					[RPET 2003]
	(a) Number of molecules	(b) Atomic number	(c)	Mass number	(d)	Number of moles
14.	A balloon contains 1500 m	³ of helium at 27°C and 4 atmosp	pheri	c pressure. The volume	of he	elium at -3°C temperature and 2
	atmospheric pressure will be					[BHU 2002]
	(a) $1500 \mathrm{m}^3$	(b) $1700 \mathrm{m}^3$	(c)	$1900 \mathrm{m}^3$	(d)	$2700\mathrm{m}^3$
15.	One litre of helium gas at a temperature attained by the	pressure 76 cm of Hg and tempera gas is	ture	27° is heated till its press	ure a	nd volume are doubled. The fina [CPMT 2000]
	(a) 927°C	(b) 900°C	(c)	627°C	(d)	327°C
16.	The pressure and temperature	re of an ideal gas in a closed vessel a	are 7	20 pka and 40°C respecti	vely.	If $\frac{1}{4}$ th of the gas is released from
	the vessel and the temperatu	re of the remaining gas is raised to 3	53°C	C, the final pressure of the	gas is	EAMCET (Med.) 2000
	(a) 1440 kPa	(b) 1080 kPa	(c)	720 kPa	(d)	540 kPa
17.	A vessels is filled with an idea	al gas at a pressure of 10 atmosphere	es ar	d temperature 27°C. Half	of th	he mass of the gas is removed from
	the vessel and temperature of	of the remaining gas is increased to 8	7°C.	The pressure of the gas in	the	Vessel Will De
	(a) 5 atm	(b) 6 atm	(c)	7 atm	(d)	8 atm
18.	S.I. unit of universal gas cons	stant is	(0)	[MN]	(u) R 198	88: MP PMT 1994: UPSEAT 1999

Problems based on Various speeds

47.	For rela	a gas at temperature T t tionship	he ro	pot-mean square velocity v_{rms} ,	the	most probable speed v_{rmp}	, and	d the average sp	eed v _{av} obey the [MP PET 2003]
	(a)	$v_{av} > v_{rms} > v_{mp}$	(b)	$v_{rms} > v_{av} > v_{mp}$	(c)	$v_{mp} > v_{av} > v_{rms}$	(d)	$v_{mp} > v_{rms} > v_{a}$	w
48 .	The	erms speed of gas molecul	les is	given by				[MNR 199	5; MP PET 2001]
	(a)	$2.5\sqrt{\frac{\mathrm{RT}}{\mathrm{M}}}$	(b)	$1.73\sqrt{\frac{\text{RT}}{\text{M}}}$	(c)	$2.5\sqrt{\frac{M}{RT}}$	(d)	$1.73\sqrt{\frac{M}{RT}}$	
49 .	At a	a given temperature if V_{rms}	, is th	e root mean square velocity o	f the	molecules of a gas and V	s the	velocity of soun	d in it, then these
	are	related as $\left(\gamma = \frac{C_{P}}{C_{v}}\right)$			[0	CPMT 1983, Bhiar CMEE	Г 19	95; MP PMT 200	01; MP PET 2002]
	(a)	$V_{rms} = V_s$	(b)	$V_{\rm rms} = \sqrt{\frac{3}{\gamma}} \times V_{\rm s}$	(c)	$V_{\rm rms} = \sqrt{\frac{\gamma}{3}} \times V_{\rm s}$	(d)	$V_{\rm rms} = \left(\frac{3}{\gamma}\right) \times V_{\rm rms}$	5
50.	On	any planet, the presence of	of atn	nosphere implies ($C_{rms} = root n$	mean	a square velocity of molecu	ıles a	and V_e = escape	velocity)
			a >	a			(1)	[RPMT 199	6; JIPMER 2000]
	(a)	$C_{\rm rms} \ll V_{\rm e}$	(b)	$C_{rms} > V_e$	(c)	$C_{rms} = V_e$	(d)	$C_{\rm rms} = 0$	
51.	To mol	what temperature should lecules become double of	the ł its pr	nydrogen at room temperature evious value	(27°	C) be heated at constant	press	sure so that the	rms velocity of its [MP PMT 2001]
	(a)	1200°C	(b)	927°C	(c)	600°C	(d)	108°C	
52.	At a	given temperature the rai	10 01	rms velocities of hydrogen mo	lecul	e and helium atom will be		[A.	MU (Engg.) 2000]
	(a)	$\sqrt{2}$:1	(b)	$1:\sqrt{2}$	(c)	1:2	(d)	2:1	
53.	If th	e molecular weight of two	gase	es are M_1 and M_2 , then at a t	empe	erature the ratio of root me	ean s	quare velocity v	and $\mathbf{v_2}$ will be
								[MP PMT 1989,	96; DPMT 2001]
	(a)	$\sqrt{\frac{M_1}{M_2}}$	(b)	$\sqrt{\frac{M_2}{M_1}}$	(c)	$\sqrt{\frac{M_1+M_2}{M_1-M_2}}$	(d)	$\sqrt{\frac{M_1-M_2}{M_1+M_2}}$	
54.	Acc	ording to the kinetic theor	y of §	gases, at absolute temperature				[CBSE PMT 19	90; AIIMS 1998]
	(a)	Water freezes			(b)	Liquid helium freezes			
	(c)	Molecular motion stops			(d)	Liquid hydrogen freezes			
55.	The	e temperature of an ideal g	jas is	increased from 27°C to 927°C.	. The	root mean square speed	of its	molecules becor	nes
				10				[NCERT 1983;	CBSE PMT 1994]
50	(a)	Twice	(b)	Half	(c)	Four times	(d)	One-fourth	
56.	At v	vhat temperature the mole	cules	s of nitrogen will have the same	e rms	velocity as the molecules	(J)	AF7°C	[MP PMT 1994]
57	(a) The	root mean square velocit	(D) v of a	a gas molecule of mass m at a g	(C) viven	temperature is proportion	(u)	437 C	CRSE PMT 1990]
07.	inc		y 01 t	r gas molecule of mass in at a g	510011		a to	1	
	(a)	m^0	(b)	m	(c)	√m	(d)	$\frac{1}{\sqrt{m}}$	
58 .	A ga	as is allowed to expand isc	other	mally. The root mean square v	elocit	ty of the molecules			[MP PMT 1986]
	(a)	Will increase		J	(b)	Will decrease			
	(c)	Will remain unchanged			(d)	Depends on the other fac	ctors		
59 .	The	total momentum of the m	nolec	ules of 1 gm mol of a gas in a c	conta	iner at rest of 300 K is			
	(a)	$2 \times \sqrt{3R \times 300}$ gm \times cm / s	sec		(b)	$2 \times 3 \times R \times 300 gm \times cm/$	sec		
	(c)	$1 \times \sqrt{3R \times 300}$ gm \times cm / s	sec		(d)	Zero			

60. If the respective velocities of three molecules of a gas are $\sqrt{7}$, 4 and 5 km/sec., then their rms velocity in km/sec will be

(a) $\frac{2+\sqrt{7}}{3}$ (b) $\frac{4}{\sqrt{3}}$	(c) 4	(d)	$4\sqrt{3}$
---	-------	-----	-------------

61. The rms velocity of molecules of a gas at temperature T is v_{rms} . Then the root mean square of the component of velocity in any one particular direction will be

(a) $v_{rms} / \sqrt{3}$ (b) $\sqrt{3} v_{rms}$ (c) $v_{rms} / 3$ (d) $3v_{rms}$

Problems based on Kinetic energy

- If a piston is pushed rapidly into a container of gas, what will happen to the kinetic energy of the molecules of gas and to the 62. temperature of the gas [JIPMER 2002] (a) Both will increase (b) Kinetic energy increases but the temperature remains unchanged (c) Kinetic energy increases while the temperature decreases (d) Kinetic energy is unchanged while the temperature increases 63. A sealed container with negligible coefficient volumetric expansion contains helium (a monoatomic gas). When it is heated from 300 K [NCERT 1980; DPMT 2002] to 600 K, the average K.E. of helium atoms is (d) Increased by factor $\sqrt{2}$ (a) Halved (b) Unchanged (c) Doubled 64. At 0 K which of the following properties of a gas will be zero [CBSE PMT 1996] (b) Potential energy (a) Kinetic energy (c) Vibrational energy (d) Density 65. The ratio of mean kinetic energy of hydrogen and oxygen at a given temperature is [NCERT 1981; MP PET 1989, 99; MP PMT 1994, 2000, 03; Pb. PMT 2000] (a) 1:16 (b) 1:8 (c) 1:4 (d) 1:1 The average kinetic energy of a gas molecule at 27° C is 6.21×10^{-21} J. Its average kinetic energy at 127° C will be 66. [MP PMT/PET 1998; AIIMS 1999] (a) 52.2×10^{-21} J (b) 5.22×10^{-21} J (c) 10.35×10^{-21} J (d) 11.35×10^{-21} J At 27°C temperature, the kinetic energy of an ideal gas is E_1 . If the temperature is increased to 327°C, the kinetic energy would be 67. [MP PMT 1996] (b) $\frac{1}{2}E_1$ (c) $\sqrt{2}E_1$ (d) $\frac{1}{\sqrt{2}} E_1$ (a) 2E₁ 68. The kinetic energy per gm mol for a diatomic gas at room temperature is [MP PET 1991] (d) $\frac{1}{2}$ RT (b) $\frac{5}{2}$ RT (c) $\frac{3}{2}$ RT (a) 3 RT The ratio of mean kinetic energy of hydrogen and nitrogen at temperature 300 K and 450 K respectively is 69. [MP PET 1990] (a) 3:2 (b) 2:3 (c) 2:21 (d) 4:9 70. If the volume of a gas is doubled at constant pressure, the average translational kinetic energy of its molecules will (c) Increase by a factor $\sqrt{2}$ (d) Become four times (a) Be doubled (b) Remain same **Problems based on Boyle's law** A graph is drawn for a given mass of a gas at constant temperature between PV and P. the curve will be 71. [CPMT 2002] (a) Parabola (b) Straight line inclined at an angle of 45°
 - (c) Straight line parallel to axis of P

(d) Straight line parallel to PV axis

72.	The relationship betwe	en pressure and the density of a gas exi	pressed by Boyle's law. P =	KINETIC THEOR	AY OF GASES
	(a) For any gas under	any conditions	(b) For some gases u	nder any conditions	
	(c) Only if the temper	ature is kept constant	(d) Only if the density	v is constant

108.	(a) T	(b) T^{-1}	(c) T^2	(d) T^4	
	(a) 1	Droblems ba	sad on Spacific heat	(u) I	
Tiblems based on Specific fleat					
► B	Basic level				
109.	Universal gas constant is			[Orissa JEE 2003]	
	(a) C_P / C_v	(b) $C_p - C_v$	(c) $C_p + C_v$	(d) C_v / C_p	
110.	The specific heat of an id	leal gas is		[CPMT 1983; RPMT 1999; CPMT 2002]	
	(a) Proportional to T	(b) Proportional to T ²	(c) Proportional to T^3	(d) Independent of T	
111. If the degree of freedom of a gas are f , then the ratio of two specific heats C_p / C_v is given by					
			[MP PMT 1990; M	IP PET 1995; BHU 1997; MP PMT 2001]	
	(a) $\frac{2}{f} + 1$	(b) $1 - \frac{2}{f}$	(c) $1 + \frac{1}{f}$	(d) $1 - \frac{1}{f}$	
112.	112. The value of C_v for one mole of neon gas is[MP PMT 2000]				
	(a) $\frac{1}{2}$ R	(b) $\frac{3}{2}$ R	(c) $\frac{5}{2}$ R	(d) $\frac{7}{2}$ R	
113.	The specific heat of a gas	s at constant pressure is greater tha	in that of the same gas at constant	volume because [UPSEAT 2000]	
	(a) At constant pressure work is done in expanding the gas against constant external pressure				
	(b) At constant volume v	work is done when pressure increa	ises		
	(c) The molecular agitat	tion increases at constant pressure			
	(d) The molecular agitat	tion decreases at constant volume			
114.	4. The specific heat of 1 mole of an ideal gas at constant pressure (C_p) and at constant volume (C_v) which is correct [UPSEAT 2000]				
	(a) C_p of hydrogen gas	is $\frac{5}{2}$ R	(b) C_v of hydrogen gas is	$\frac{7}{2}$ R	
	(c) H_2 has very small va	alues of C_p and C_v	(d) $C_p - C_v = 1.99 \text{cal} / \text{mc}$	$ble - K$ for H_2	
115.	In gases of diatomic mole	ecules, the ratio of the two specific	heats of gases C_p / C_v is	[EAMCET (Med) 1995]	
	(a) 1.66	(b) 1.40	(c) 1.33	(d) 1.00	
116.	When an ideal monoator of the gas is	mic gas is heated at constant press	ure, the fraction of heat energy sup	oplied which increases the internal energy [AIIMS 1995]	
	(a) $\frac{2}{5}$	(b) $\frac{3}{5}$	(c) $\frac{3}{7}$	(d) $\frac{3}{4}$	
117.	If R is gas constant and C	C_p and C_v are specific heats for a	solid per mole, then for the solids	[CPMT 1977]	
	(a) $C_p - C_v = R$	(b) $C_p - C_v << R$	(c) $C_{p} - C_{v} = 0$	(d) $C_p - C_v$ is negative	
118.	When two moles of oxyg specific heat of oxygen at	gen is heated from 0°C to 10°C at t constant volume	t constant volume, its internal ener	rgy changes by 420 J. What is the molar	
	(a) $5.75 \text{ J-K}^{-1} \text{ mol}^{-1}$	(b) $10.5 \text{ J-K}^{-1} \text{ mol}^{-1}$	(c) $21 \text{ J-K}^{-1} \text{ mol}^{-1}$	(d) 42 J-K ⁻¹ mol ⁻¹	
119.	If U represents the intern constant pressure is	al energy of one mole of a gas a	nd T is the absolute temperature, t	then the molar specific heat of the gas at	
	(a) $\frac{\mathrm{d}\mathrm{U}}{\mathrm{d}\mathrm{T}}$	(b) $\frac{\mathrm{d}\mathrm{U}}{\mathrm{d}\mathrm{T}} + \mathrm{R}$	(c) $\frac{dU}{dT} - R$	(d) $R - \frac{dU}{dT}$	

Advance level

when the volume changes from V to 2V at constant pressure P is (c) $\frac{PV}{\gamma - 1}$ (d) $\frac{\gamma PV}{\gamma - 1}$ (a) $\frac{R}{\gamma - 1}$ (b) PV 121. A sample of ideal gas ($\gamma = 1.4$) is heated at constant pressure. If an amount of 100 J heat is supplied to the gas, the work done by the gas is (a) 42.12 J (b) 56.28 J (c) 28.57J (d) 36.23 J **Problems based on Mixture 122.** If one mole of a monoatomic gas $(\gamma = 5/3)$ is mixed with one mole of diatomic gas $(\gamma = 7/5)$, the value of γ for the mixture is [IIT-JEE 1986; RPMT 1996; AIEEE 2002] (b) 1.50 (d) 3.07 (a) 1.40 (c) 1.53 A gaseous mixture contains equal number of hydrogen and nitrogen molecules. Specific heat measurements on this mixture at 123. temperatures below 150 K would indicate that the value of γ (ratio of specific heats) for this mixture is [SCRA 1998] (a) 3/2 (b) 4/3 (c) 5/3 (d) 7/5 Two ideal gases at temperature T_1 and T_2 are mixed. There is no loss of energy. If the masses of molecules of the two gases are m_1 124. and m_2 and number of their molecules are n_1 and n_2 respectively, the temperature of mixture will be (a) $\frac{T_1 + T_2}{n_1 + n_2}$ (c) $\frac{n_2T_1 + n_1T_2}{n_1 + n_2}$ (d) $\frac{n_1T_1 + n_2T_2}{n_1 + n_2}$ (b) $\frac{T_1}{n_1} + \frac{T_2}{n_2}$ **125.** Two moles of a monoatomic gas are mixed with one mole of a diatomic gas. The γ for mixture is (c) $\frac{4}{3}$ (d) $\frac{17}{11}$ (a) $\frac{5}{3}$ (b) $\frac{7}{5}$

The ratio of specific heat of a gas at constant pressure to that at constant volume is γ . The change in internal energy of a mass of gas

126. A mixture of n_1 moles of monoatomic gas and n_2 moles of diatomic gas has $\gamma = 1.5$, then

120.

(a) $n_1 = 2n_2$ (b) $2n_1 = n_2$ (c) $n_1 = n_2$ (d) $2n_1 = 3n_2$
